Confiauto

Trust and fair-pricing for person-to-person used-car deals in Brazil

Author: Felipe de Almeida · Strategy & Product

Format: End-to-end product proposal (market → product → GTM) · Status: Concept v1

Executive summary

Brazil sells ~5 used cars for every new one, and most of these are person-to-person deals where the buyer carries all the risk. Fraud is endemic: ~91k online scams a year, R\$2.7B in losses, vehicle cloning up 37% in 2025, and an estimated 30% of used cars with tampered odometers. Buyers cope by overpaying for caution or walking away; sellers lose deals to distrust.

Confiauto is a mobile product that removes risk from the deal in three steps: (1) an instant fair-price valuation, (2) a one-tap trust report on the vehicle and the seller, and (3) a secure transaction with escrow and independent inspection. It monetizes the moment of highest intent — the transaction — rather than charging for listings.

1. Market context

- **Scale:** 18.5M used vehicles sold in 2025 (+17.3% YoY), a record; roughly 5 used cars per new car.
- **Risk:** ~91k online sale scams/year and R\$2.7B in losses; cloning +37% in 2025; ~30% of used cars with odometer tampering.
- **Behavior shift:** Buyers increasingly research and transact online, but trust and payment still happen offline and unprotected.

The gap: marketplaces are great at discovery (find a car) but stop short of the risky part — verifying it and paying safely. That is where value and willingness-to-pay concentrate.

2. Problem & target users

The buyer (primary)

“I found a car I like, but I don’t know if the price is fair, if the car is clean, or if I’ll be scammed when I pay.” Time-poor, financially exposed, no easy way to verify.

The seller (secondary)

“My car is legit and fairly priced, but buyers are suspicious and deals fall through or take weeks.” Wants to signal trust and close faster.

Both sides share one job-to-be-done: close a fair deal without getting burned. Today no one owns that job end-to-end.

3. Solution — three pillars

- **Fair valuation:** instant price estimate from FIPE + live listings, adjusted for mileage, version and region, with a buy/avoid signal.
- **Trust report:** a 0–100 trust score combining odometer consistency, theft/cloning checks, debts, auction history, and seller CPF verification.
- **Secure deal:** escrow that holds payment until the buyer confirms receipt, plus an optional 220-point independent inspection.

4. Product walkthrough

Three core screens take a buyer from “is this a good deal?” to “money moved safely.”

- **Screen 1:** the user enters a plate; Confauto returns a fair-price range and flags whether the asking price is a good deal — the hook that drives the first session.
- **Screen 2:** one tap turns valuation into a trust report; green/amber checks make risk legible in seconds and create the reason to transact in-app.
- **Screen 3:** escrow and inspection turn intent into a protected transaction — the step that earns revenue and trust at once.

5. Business model

Stream	How it works	Why it works
Secure-deal fee	1.5–2.5% of vehicle price on escrowed transactions, split or seller-paid.	Charges the moment of highest value; aligned with a successful deal.

Stream	How it works	Why it works
Premium trust report	R\$29–49 for a full report on any vehicle (incl. off-platform).	Low-friction first revenue; useful even before transacting.
Inspection	Margin on the 220-point independent inspection.	High willingness-to-pay; reduces disputes.
Qualified referrals	Insurance & financing offers at the point of purchase.	Buyers need both exactly then; strong attach rate.

6. Go-to-market

- **Wedge:** lead with the free valuation + paid trust report — useful even for cars found on other platforms, so adoption isn't gated by supply.
- **Channel 1:** SEO/content on “is this car price fair?” and “how to avoid used-car scams” — high-intent, low-CAC.
- **Channel 2:** partnerships with multi-brand dealers who want a trust badge to close faster.
- **Channel 3:** integration/affiliate with classifieds (a “Check with Confiauto” button).
- **Land-and-expand:** start with reports (transactional), then pull volume into escrow as trust builds.

7. Competitive landscape & differentiation

Player	Strength	Confiauto edge
Classifieds (Webmotors, OLX, ML)	Discovery & supply	We own verification + payment, not listings
Instant-buy (Kavak, InstaCarro)	Convenience, inventory ownership	Asset-light; serves P2P deals they don't
Report tools (history checkers)	Data on the vehicle	We bundle valuation + seller trust + secure payment

8. Roadmap

Phase	Timeline	Focus
0 · Validate	M0–M2	Valuation + trust report MVP; measure willingness-to-pay for reports.
1 · Monetize trust	M3–M6	Paid reports + inspection partner; SEO engine.
2 · Secure deal	M7–M12	Escrow + transfer assist; first take-rate revenue.
3 · Ecosystem	M12+	Insurance/financing attach; dealer trust badge; API.

9. Success metrics

North Star: protected GMV — R\$ value of vehicles transacted through escrow.

Metric	Stage	Why it matters
Valuation → report conversion	Activation	Proves the hook creates intent to verify
Paid report attach rate	Early revenue	Validates willingness-to-pay before escrow exists
Report → secure-deal conversion	Core loop	The bet that trust pulls payment in-app
Protected GMV	North Star	The compounding revenue base
Dispute/fraud rate on closed deals	Trust guardrail	The whole promise of the product

10. Key risks & mitigations

- **Data access:** trust checks depend on third-party data (Detran, history, theft). Mitigate via data partnerships and a clear value exchange; start with what's available.
- **Off-platform leakage:** users verify in-app then pay outside. Mitigate by making escrow cheaper than the expected loss and bundling inspection + transfer convenience.
- **Trust paradox:** a young brand asking to hold money. Mitigate with a regulated payment partner, visible guarantees, and dealer endorsements.
- **Regulatory:** escrow/payments are regulated. Mitigate by partnering with a licensed PSP rather than building it.
